

FARM DEVELOPMENT – AGRI PARKS

Overview.

Agri Parks offer Governments and commercial clients a way to establish dairy and meat production.

The Agri Park concept includes vertically integrated food production systems “from gate to plate” with the final product being produced under International brand specifications. It allows the client to control all aspects of the production beginning from setting up appropriate farm models, selecting live stock genetics and establishing own dairy or meat processing operation on the territory of the Park.

We develop and operate various production models to suit each client’s geographical location and production targets. This also includes confinement dairy and beef production models for hot and cold climate zones. All projects include high genetic value livestock and farm technology supply, as well as local staff training packages.

Intellectual property surrounding the concepts and processes of Agri Park development is listed below.

TECHNICAL

The feasibility and technical project development stage will provide solutions for farm infrastructure layout, selection of suitable livestock genetics, soil and forage testing and analysis, pasture and fencing and improvement plan, animal feed budgeting, selection of appropriate meat/dairy processing technology, establish livestock recording systems.

Farm management systems will involve monitoring of Key Performance Indicators (KPI) and use of on-farm computerized systems for accounting, farm logistics, cold chain product management, production statistics, seed germ plasm breeding and other.

Dairy or meat processing facilities will involve not only technical design and selection of plant equipment for the Client but also marketing and product licensing for international markets.

PERSONNEL

Our consultants are experienced in working with a range of government and private agricultural companies in many countries such as China, Mexico, Chile, USA, Tajikistan, Vietnam, Mongolia and others.

We take responsibility for selecting specialists who are familiar with the social, economic, climatic and geographical conditions of your region. We are committed to work very closely with your staff and professional advisors to maximize the

transfer of our knowledge and identify the most suitable technology solution for your company, organization or region.

FINANCIAL

Financial services and investment solutions can be evaluated for farm/land ownership, current animal production systems and other. It is essential that Tranzfutura is able to be engaged with your organization early in the feasibility stage to ensure that necessary information base and appropriate financial plans are developed to ensure return on investment and ongoing profitability of your enterprise.
